

VoiceLine enables you to profit from the rapidly growing broadband telephony market.

Your broadband customers can save on both outbound and inbound calls with a variety of flexible calling plans.

With the Net2Phone VoiceLine service, you can:

- Provide a feature-rich, low-cost VoIP calling service with a variety of calling plans
- Offer telephone numbers from different countries
- Target both residential and small business markets

Low-Cost Calling Plans

VoiceLine is a pre-paid service that enables users to save on both inbound and outbound calling, including faxing. Flexible calling plans designed to meet the needs of residential and small business customers all over the world include:

- Unlimited calling plans (inbound and outbound)
- Fixed / "bucket of minutes" calling plans
- A pay as you go model

In addition, VoiceLine provides popular calling features such as:

VoiceMail (can even be accessed on-line)

Caller ID

Call waiting

Redial

Call return

Speed dial

Automatic callback

Anonymous call blocking

Call forwarding

Call transfer

3-way calling

Do not disturb

Freedom to Choose

Now your broadband customers can benefit from having a telephone number from a different country, no matter where they reside. Customers can choose numbers from a variety of countries, including:

- | | | | | | |
|--------|----------|---------------|----------|------------|----------|
| • U.S. | • Canada | • Netherlands | • Spain | • Portugal | • Poland |
| • U.K. | • France | • Switzerland | • Sweden | • Belgium | |

Customers can also choose from a number of hardware calling devices, including:

- The InnoMedia MTA 3328-2 or MTA 3328-2R VoIP telephone adapters
- The VoiceLine XJ200 Wi-Fi Handset

Market Opportunities

Potential VoiceLine customers include:

- **Residential broadband users**, who can drastically reduce their communication costs with family, friends and business contacts all over the world. For example, if a customer has contacts in New York, they can select a New York telephone number and their contacts can call them without incurring long distance charges.
- **Small businesses**, who can utilize VoiceLine to establish an international presence. For example, a company with customers in the U.K. could obtain a U.K. telephone number for service and support. Since the process is seamless, callers will have the same experience as they would calling any number in the U.K.

And, VoiceLine makes it easy for you to offer a VoIP calling service by providing a number of partner tools, including:

- A Web-based partner resource center that enables you to manage your VoiceLine business
- An on-line account center that allows users to view call history data and manage their account
- Localization support
